EDUCATION

University of Houston
Bachelor of Science
Major in Computer Science, Minor in Mathematics

Houston, TX
December 2025

WORK EXPERIENCE

KwickPOS

IT Specialist

Houston, TX

January 2025 - Present

- Installed, configured, and maintained POS software on Windows-, Android-, and Linux-based terminals, including receipt printers, cash drawers, barcode scanners, and payment devices (PAX A35/A920/S300, MagTek)
- Diagnosed and resolved POS application errors, payment processing issues, hardware failures, and local network connectivity problems, reducing client downtime while managing 20+ support tickets daily and documenting issues and resolutions
- Provided remote and on-site technical support, performed software and server updates, and trained merchants and agents on proper system operation via phone and group-based support channels

PROJECTS

TimeScout: AI-Assisted Watch Marketplace Aggregator

April - Present 2026

Created using Next.js, TypeScript, MySQL, Drizzle ORM, Python, scikit-learn, Reddit API, OpenAI API

- Built a full-stack marketplace aggregator for r/Watchexchange to convert unstructured Reddit posts into searchable watch listings with normalized brand, reference, condition, price, sold status, bundle status, and watch type fields.
- Designed a hybrid extraction pipeline to handle noisy seller text by combining regex parsers, Reddit flair/body/OP-comment parsing, TF-IDF logistic-regression classifiers, confidence thresholds, and optional OpenAI-based classification.
- Improved data reliability across 3,000+ listings by adding field-level provenance, manual review queues, reviewed-unknown handling, price precedence rules, stale flag cleanup, gold evaluation cases, and retraining/backfill workflows.

Postal Service Management System

January - April 2025

Created using MySQL, PHP, HTML/CSS, XAMPP, SQL, ER Modeling

- Engineered a multi-role web platform (Customer, Employee, Admin) using PHP and MySQL to manage package logistics, shop inventory, sales processing, and support tickets for a courier service.
- Designed and normalized a relational database with over 15 interconnected tables, including packages, trips, vehicles, inventory, and sales — enforcing integrity via foreign keys, constraints, and ER modeling.
- Implemented reporting and trigger systems: auto-alerted managers for low inventory and auto-alert customers when a package has been delivered; generated sales reports, delivery tracking logs, and support ticket summaries using advanced SQL joins and filters.

Web-Based User Management System

January - April 2025

Created using Flask, HTML, CSS, JavaScript, PostgreSQL, Microsoft OAuth 2.0, Docker

- Architected a scalable academic workflow system using Flask and PostgreSQL that processes form submissions through
- Implemented comprehensive authentication and security using Microsoft 365 OAuth2, building role-based access control across Department Counselors, Academic Directors, and College Supervisors with custom permission decorators.
- Engineered an administrative interface with configurable workflow engine allowing detailed control of approval sequences, role-specific permissions, and real-time monitoring of user submissions and approvals..

CERTIFICATION

Data Analytics Professional Certificate

Online

Google

July 2024 - Jan 2025

- Gained hands-on experience in data cleaning, data visualization, project management ,and interpreting and communicating data analytics findings.

SKILLS

Languages: Python, JavaScript, SQL, PHP, C++, C#, HTML/CSS

Frameworks & Libraries: Flask, Next.js, React, scikit-learn

Software & Tools: MySQL, PostgreSQL, Docker, Git, Tableau, Power BI

Data Analytics & Platforms: Machine Learning, ETL Pipelines, REST APIs, Database Design
